
next keyframe
1 Keyframe
RGB(-D)
LSeg
2 Lifting
one render +
one backward pass
per Gaussian and view:
$\mathbf{u}_v$, weight ω_v
3 Change test
before
$\bar{c} > \theta(h)$: reset
re-admitted when
the depth agrees
4 Evidence and uncertainty
running sums $\mathbf{R}$, W_1, W_2, Q
u^{epi}: how much
evidence
u^{ale}: do the
views agree
5 Query
text queries $\mathbf{t}_c$
labels and $P(y{=}c)$
earlier evidence of each Gaussian
